Moving a network license to another machine

Copy "haspdinst.exe" and "Rus.exe", located in the SigmaPlot 13 directory in program files or on the installation CD in the License Manager folder, to the machine you want to move the network licenses to. Install the license manager on that machine. Both the source and target machines must have the license manager service installed.

Now start the RUS.exe, with administrative privileges, on the target machine and select Transfer License tab.

Generate the license transf Step 2: On the computer the license to transfer, rear Key Type	fer file nat currently contains t d the recipient informat Gey ID	he icense (the ' ion file and gene Products	'source computer erate a license tra	"), select ansfer file.
Generate the license transf Step 2: On the computer th the license to transfer, read Key Type	fer file aat currently contains t d the recipient informat Gey ID	he license (the ion file and gen Products	source computer erate a license tr	"), select ansfer file.
Generate the license transf Step 2: On the computer the license to transfer, reas Key Type	fer file nat currently contains t d the recipient informat Key ID	he icense (the ' son file and gene Products	'source computer erate a license tr	"), select ansfer file.
Generate the license transf Step 2: On the computer the license to transfer, read Key Type	fer file nat currently contains t d the recipient informat Gey ID	he license (the ion file and gene Products	Source computer erate a license tr	"), select ansfer file.
Generate the license transf Step 2: On the computer the fine license to transfer, rear Key Type	fer file at currently contains t d the recipient informat Gey ID ton file from	he license (the ' ion file and gene Products	Source computer rate a license tr	"), select ansfer file.
Generate the license transf Step 2: On the computer the license to transfer, reas Key Type	ter file at currently contains t d the recipient informat Gey ID toon file from fer file to	he icense (the ' ion file and gene Products	Source computer trate a license tr), select ansfer file.

Enter the file name and location in the 'Save recipient information to field' and press the Collect and Save Information button. This will generate a *.id file for the target machine that will be used later to receive the network licenses being moved.

Click OK to generate the target machines identification file. Make sure this file is either copied to the machine where the licenses are currently installed or available over the network.

Run RUS.exe, with the administrative privileges, on the machine where the licenses are currently installed and select the transfer license tab.

Generate the license transfi Step 2: On the computer th the license to transfer, read Key Type K Read the recipient informati Generate the license transfi	er file at currently the recipien iey ID on file from er file to	contains t It informat W 13_Net Network	he license (th on file and gr Products twork_License SPW 13_Insta	e "source o merate a la t_Assistanc ilation_file:	omputer", cense tra ce/file 1.id s/file.hzh), select nsfer flie.

In the 'Read the recipient information file from' field locate the .id file from the target machine. Now enter a file name and location where you want the new transfer license file to be saved in the 'Generate the license transfer file to' field. Click the Generate License Transfer File button to create the transfer file with the extension *.h2h.

This file is your new license file that can be installed on the target machine. Launch the license manager and attach this file to make the network licenses available again.
