

SigmaPlot statistics result graphs.

When you run a statistical test in SigmaPlot, it is possible to right-click on the report page and create a result graph that is appropriate for that test. These graphs can be modified by the Graph Properties, or by the mini toolbars, but the data is not directly available, so if, for example, you want to reorder the elements of a graph, it is not possible to change the order of the data.

This is easily resolved by copying the graph and pasting it into a new graph page. If this is created within the section of the report, the hidden data is pasted into the existing worksheet.

Before & After Line Plot

The above can be modified by rearranging the data to appear as below.

Before & After Line Plot
