Formatting Worksheet Areas

How do you format ranges in the data worksheet?

1. You can set the defaults for new worksheets in the Options menu: Main button (Σ) > Options > Worksheet > Settings for: Numeric > Display as/Decimal places.

2. To format selected ranges, use Rightclick > Format Cells (or Worksheet-Ribbon > Format).

#	1	2	3	4	5
1	1,0000	G	11,00		
2	2,0000	7			
3	3,0000	8	00		
4	4,0000	9		🖳 💽 🔤	
5	5,0000	10	15.00		
5				Cut	
7				Сору	
8				Paste	
9				Delete	
10				DHEIF	
11				Transpose Past	e
12					
13				Insert Cells	
11				Delete Cells	
15				Format Cells	
15				4	· · · · · · · · · · · · · · · · · · ·
17				Formattext	
13				Unformat text	
19					

Format Cells	X

.

Export worksheet data as formatted (decimal places) to the clipboard

SigmaPlot can copy worksheet data to the clipboard

- a) in full precision, or
- b) with the number of decimal places which are set in the worksheet.

To switch between both options select the Main button (Σ) > Options > Worksheet > Numeric: Copy and paste.

	1	2	3	4
1	1,0000	6	11,00	
2	2,0000	7	12,00	
3	3,0000	8	13,00	
4	4,0000	9	14,00	
5	5,0000	10	15,00	
6				

Then choose from

.

- Copy numeric data with full precision
- Copy numeric data with display precision

For details, please see the "Export worksheet data as formatted (decimal places) to the clipboard" TechTip: <u>http://www.systat.de/TT201607/ExportPrec_EN.pdf</u>.
